                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a suitable host cell transfected with an risolated nucleic acid molecule comprising a sequence of nucleotides or ribonucleotides that encodes at least one alpha or beta subunit of a human neuronal nicotinic acety/choline receptor (NAChR). The compositions and methods of the present invention, which provide a means to prepare synthetic or recombinant receptors and receptor subunits that are substantially free of contamination from many other receptor proteins, are useful for observing the effect of a drug substance on a particular subtype to perform in vitro screening of the drug substance in a test system that is specific for humans. The antibodies can be used in immunochemistry and for diagnostic and therapeutic applications. The present sequence represents a human neuronal NAChR alpha7 subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nicotinic acetylcholine receptor; NAChR; drug screening; NAChR alpha7 subunit; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cell comprising nucleic acids encoding human alpha and beta subunits of
neuronal nicotinic acetylcholine receptors, useful for in vitro screening
of a drug substance in a test system specific for humans.

The present invention describes an isolated antibody that binds to one of the human PRO proteins designated PR0212, PR029, PR0341, PR0535, PR0619, PR01030, PR0830, PR0848, PR0943, PR01005, PR01009, PR01021, PR01021, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR01081, PR02084, PR02145 OR PR02199. PR0 and bused to interact compounds and nucleotides are useful in the treatment, diagnosis and prevention of cancer. The antibodies and other anti-tumour compounds maybe used to treat various conditions, including those characterised by conditions or disorders to be treated with such antibodies and other compounds include benign or malignant tumours (e.g., renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulva, thyroid, hepatic carcinomas, sarcomas, and various head and neck tumours), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocolic disorders, and inflammatory, angiogenic and hybridisation probes used in the isolation of the human PRO sequences.

m 310 Special cell culture medium for treating cells and for inducing mammalian cell lines to conduct calcium ions, comprising specified concentrations of ions of sodium, calcium and potassium at specified pH. 130 154 214 274 CCCACAGACTATGGAAACCAGACGTCCTTATGTACAACAGCGCGGACGAAGGGTTCGACA 394 311 ATGGCCAGATTTGGAAACCAGACATTCTTCTTTAAACAGTGCTGATGAGGCGCTTTGACG 370 94 70 The present sequence is the coding sequence for a mutant human alpha7 nicotinic acety/choline gated ion channel. The human alpha7 ion channel was used in the construction of an alpha7/5-hydroxytryptamine (5-HT3) chimeric ligand gated ion channel (see AAC90382 and AAB50014). The alpha7/5-HT3 chimeric ion channel can be expressed by recombinant cells in the present invention, resulting in preferential calcium ion conductance by the cells. The protein encoded by this sequence has the wild-type threonine residue at position 230 substituted by a proline 35 CGCCCGCGCGCCTGCTGCTGCTGTGCTCTGCTCTGGCCGAGGGGGGGCACGCTGCGGGT CGCCGGGAGGCGTCTGGCTGGCGCTGGCCGCGTCGCTCCTGCACGTGTCCTGCAAGGCG 95 ACCACGAGAAGCGGCTACTGCACCACCTATTGGACCACTACAACGTACTGGAGAGGCCCG AGTTCCAGAGGAAGCTTTACAAGGAGCTGGTCAAGAACTACAATCCCTTGGAGAGAGGCCCG TCGTCAACGAGAGCGACCCGCTGCAGCTCTCCTTCGGCCTCACGCTCATGCAGATCATCG TGGCCAATGACTCGCAACCACTCACCGTCTACTTCTCCCTGAGCCTCCTGCAGATCATGG **ACGTGGACGAGAAGAACCAGCTTTTAATAACAAACATCTGGCTAAAAACTAGAGTGGAAT**G 191 ACGTGGATGAGAAGAACCAAGTTTTTAACCACCAACATTTGGCTGCAAATGTCTTTGGACAG ATATGAACTTGAGGTGGAACACTTCAGATTTCGGCGGGGTCAAAGATTTAAGAGTGCCAC ATCACTATTTACAGTGGAATGTGTCAGAATATCCAGGGGTGAAGACTGTTCGTTTCCCAG Gaps 42; Sequence 1509 BP; 296 A; 452 C; 429 G; 332 T; 0 U; 0 Other; 605; Indels Score 404; DB 4; Pred. ```
Special cell culture medium for treating cells and for inducing mammalian cell lines to conduct calcium ions, comprising specified concentrations of ions of sodium, calcium and potassium at specified pH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is the coding sequence for a mutant human alpha7 nicotinic acetylcholine gated ion channel. The human alpha7 ion channel was used in the construction of an alpha7/5-hydroxytryptemine (5-HT3) chimeric ligand gated ion channel (see AAC90382 and AAB50014). The alpha7/5-HT3 chimeric ion channel can be expressed by recombinant cells in the present invention, resulting in preferential calcium ion conductance by the cells. The protein encoded by this sequence has the wild-type cysteine residue at position 241 substituted by a serine  ```
Special cell culture medium for treating cells and for inducing mammalian cell lines to conduct calcium ions, comprising specified concentrations of ions of sodium, calcium and potassium at specified pH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is the coding sequence for a mutant human alpha7 nicotinic acetylcholine gated ion channel. The human alpha7 ion channel was used in the construction of an alpha7/5-hydroxytryptamine (5-HT3) chimeric ligand gated ion channel (see AAC90382 and AAB50014). The alpha7/5-HT3 chimeric ion channel can be expressed by recombinant cells in the present invention, resulting in preferential calcium ion conductance by the cells. The protein encoded by this sequence has the wild-type threonine residue at position 230 substituted by a proline residue and the wild-type cysteine residue at position 241 substituted b a serine residue.
                                                                                                                                                                          AGTICGCCGCCTGTGTGGTGGACCGCCTGTGCCTCATGGCCTTCTCGGTCTTCACCATCA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             15 TCGTCAACGAGAGCGACCCGCTGCAGCTCTCCTTCGGCCTCACGCTCATGCAGATCATGG
